

PERSONAL PROFILE

Backend Developer with expertise in Java, Spring Boot, and REST APIs, experienced in building scalable and efficient web applications. Passionate about backend optimization, database performance, and system architecture. Hands-on experience through internships, freelance projects, and real-world projects. Based in San Diego, CA, and actively seeking backend or full-stack developer roles in dynamic, growth-oriented tech environments.

TECHNICAL SKILLS

- **Backend Development:** Java Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, REST APIs
- **Database Technologies:** MySQL, PostgreSQL, MongoDB, SQL
- **Development Practices:** Agile, Scrum, Object-Oriented Programming (OOP), SOLID principles
- **Testing & Debugging :** JUnit, Postman(API testing), Swagger/OpenAPI (API Documentation), Exception Handling, Logging.
- **Version Control & Build Tools :** Git, GitHub, Maven
- **Tools & IDEs :** IntelliJ IDEA, Eclipse, VS Code, Spring Tool Suite (STS)

CERTIFICATIONS

- Scrum Fundamentals Certified (SFC)
- DELF B2 French-language proficiency certificate.
- B1 German Certificate

LANGUAGES

Fluent: English, French, Arabic, Darija.

Intermediate: German, Maltese.

Basic: Spanish, Russian, Turkish.

PROFESSIONAL EXPERIENCE

Trans Globe Power - United States (Remote)

Backend Developer

May. 2023 - Feb. 2025

- Developed and maintained internal backend services using Java and Spring Boot to support field operations and job scheduling workflows.
- Designed and implemented RESTful APIs for technician job management, customer data, and task completion tracking.
- Integrated Spring Security with JWT for authentication and fine-grained role-based access control.
- Modeled and managed relational data using SQL with PostgreSQL to store job orders, user roles, and performance logs.
- Provided API documentation using Swagger/OpenAPI and supported integration with internal frontend/mobile tools.
- Implemented centralized error handling, logging, and simple performance monitoring to ensure backend reliability.
- Used Docker during development to containerize backend services and streamline testing and environment setup.

DataWize Internship - France (On-site, Tunis Office)

Full Stack Developer

Jan. 2022 - Jul. 2022

- Developed and optimized backend components and APIs using Spring Boot and Java, improving data efficiency with MongoDB.
- Built and integrated frontend interfaces using ReactJS.
- Designed and documented application architecture with UML diagrams.

Ambulances Avril Internship - France (Remote)

Backend Developer

Jun. 2021 - Oct. 2021

- Built and maintained backend services and APIs for vehicle scheduling, driver assignments, and availability.
- Implemented booking APIs to enhance service coverage and prevent double-booking.
- Integrated backend services with frontend applications for a seamless user experience.

EDUCATION

2017 - 2022 National Degree of Engineer, Specialized in Software Engineering

Higher Private School of Engineering and Technologies (ESPRIT), Tunisia

Equivalent to a U.S. Master's degree in Software Engineering, awarded after completing a rigorous 5-year engineering program in software architecture development.

- Affiliated with Honoris United Universities, a leading education network in Africa and the Middle East.
- Focused on project-based learning through the CDIO Initiative (Conceive, Design, Implement, Operate).
- Accredited with EUR-ACE (issued by the CTI), ensuring international recognition.
- Recognized by UNESCO, UNiTwin, and AUF for promoting academic excellence and collaboration.
- Member of the Conférence des Grandes Ecoles (CGE), France's most prestigious higher education network.

2016 - Baccalauréat in Mathematics

Abu-El-Qassem Echebbi High School, Tunisia

- Equivalent to U.S. high school completion. Speciality : Mathematics

ACADEMIC PROJECTS

2021 - DevOps Project

- Developed and launched a Jenkins pipeline to automate the deployment of a Spring Boot application.
- Technologies used: Maven, JUnit, Jenkins, SonarQube, Nexus, Docker.

2021 - Kindergarten Social Network Project

- Designed and developed a social network web application with Spring Boot for backend and ASP.Net for frontend.
- Focused on backend services, real-time interactions, and database management.
- Technologies used: Spring Boot, ASP.Net, SQL.

2021 - WINIT Mini Android Project

- Developed WINIT, a tournament management app, using Java and Android Studio.
- Managed data storage using Room Database for efficient local data handling.
- Technologies used: Java, Android Studio, Room Database.

2020 - Huntkingdom Project

- Contributed to backend development and integration of multi-platform applications (web, desktop, mobile) using Java-based technologies.
- Technologies used: Symfony 3.4, JavaFX, Codename One.

2019 - SMART SUPERMARKET Project

- Developed a desktop application in C++ integrated with an Arduino Uno microcontroller to monitor various sensors.
- Enhanced system efficiency and safety by automating hazards detection.
- Technologies used: C++, Arduino Uno, RFID technology, Sensors.
